

The WMS with GO-ONE® Engine

We power up the boost
for your future-ready logistics

CLOUD
NATIVE

EXAMPLE: WAREHOUSE MANAGEMENT

With **GO-ONE**®, we solve key logistics requirements.

WMS

HIGH-DYNAMIC LOGISTICS REQUIREMENTS

GO-ONE®

HIGHLY FLEXIBLE SOFTWARE ARCHITECTURE

TAILOR-MADE Solution

Different industries and individual processes need to be mapped flexibly and efficiently.

With **GO-ONE**®, your tailored solution remains intact and evolves with continuous updates to enhance performance.

Dynamic FLEXIBILITY

Strategy changes or new customer requirements must be implemented quickly.

Thanks to our **one-version strategy**, new requirements can be implemented independently without delay.

Maximum STABILITY

The software must deliver continuously – without interruptions, even during peak performance.

Our **cloud-native software** scales dynamically through a containerized architecture – ensuring maximum performance and availability.

Fast ONBOARDING

New clients, locations and business processes must be ready to go immediately.

Flexibly **configurable parameters** via our intuitive user interface enable fast onboarding.

More on the next page.

Efficient **PROCESS OPTIMIZATION**

Lean principles and the automation of recurring tasks must be actively supported.

*plx.wmx® supports **lean management** through continuous process optimization with automated workflows and flexible customization options.*

Flexible **WORKFORCE MANAGEMENT**

The WMS must be easy to use to effectively support changing teams.

*Our **intuitive interface** simplifies staff onboarding and continuously evolves for a seamless user experience.*

Unlimited **TECHNOLOGY FREEDOM**

New technologies such as AI, robotics or automation should be integrable without system disruptions.

*Thanks to the **API-first approach** and modular microservices, plx.wmx® integrates new technologies easily, precisely and reliably.*

FUTURE-PROOF Software

The software must evolve dynamically to meet future requirements.

*plx.wmx® remains **agile** – new features and developments continuously flow into your tailored WMS solution.*

Decades of logistics experience are built into our software solution.

Xplx.wmx®

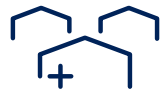

FEATURES

Multi-client

All clients in a single instance

Multi-site

Multiple sites in a single instance

Multilingual

German, English and additional languages

Industry templates

Rapid onboarding of new clients

AI Integration

Optimizing overall process efficiency

Picking strategies

Multi-order picking, batch picking and more

Returns management

Efficient processing and return flows

Automation

Control of automated systems & robotics

Interfaces

Fast integration of external systems

Scalability

High speed enabled by containers & microservices

Devices

Usability through responsive design

Dashboards

Real-time warehouse KPIs

User management

Role-based control of access rights

Configuration

Customizable processes and settings

Knowledge portal

Manual, FAQs and software news
